Research

I am currently engaged in interdisciplinary research in computational imaging, optical microscopy, and neuroscience. I have published a series of papers in top international journals including *Nature Methods*, *Nature Biotechnology*, *Nature Computational Science*, and *Light: Science & Applications*. My current research includes:

- 1. Intelligent microscopy:** Developing high-performance intelligent image processing methods to improve the performance of optical microscopy.
- 2. Quantum imaging:** Exploring the new paradigm of combining quantum entanglement and optical imaging to surpass the photon shot-noise limit and diffraction limit.
- 3. Neural functional imaging:** Improving the depth, speed, and signal-to-noise ratio of neural functional imaging. Developing advanced processing methods for large-scale neural imaging data to decipher the correlation between animal behavior and neural activity.
